Subject Name: Event Driven Programming   **Module**: 1

Quarter: Prelim

Identification: (Sa ubos magtuon)

1. _____- a class in .NET that encapsulates a method.

2. _____- used in declaring a delegate on a class.

3. To instantiate the delegate, use the _____ that is associated with the method and supposed to refer on the object.

4. _____- can also be done in delegates.

5. _____- are not bound to any specific type.

6. _____- a member of a class that is fired whenever a specific action takes place.

7. The methods that are invoked when an event occurs are known as _____.

Answer Key:

1. **Delegate** - a class in .NET that encapsulates a method.

2. **delegate keyword** - used in declaring a delegate on a class.

3. To instantiate the delegate, use the **new keyword** that is associated with the method and supposed to refer on the object.

4. **Invoking on referenced methods** - can also be done in delegates.

5. **Generic delegates** - are not bound to any specific type.

6. **event** - a member of a class that is fired whenever a specific action takes place.

7. The methods that are invoked when an event occurs are known as **event handlers**.
